***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 5 and 7-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berlowitz et al (6,663,767) alone or in combination with Bacha et al (6,776,897).

Berlowitz et al ["Berlowitz"] disclose a diesel fuel blended fuel composition which comprises an undercut conventional diesel fuel and a Fischer-Tropsch derived diesel fuel. Berlowitz teaches that the blend demonstrates better than expected emissions and a reduced sulfur content when used in a diesel engine. See column 2, lines 17-63. The Fischer-Tropsch derived diesel fuel is set forth in columns 3-4 and the examiner is of the position that this meets the limitations of the Fischer-tropsch derived gas oil of the claims. The blended fuel composition was subjected to engine testing wherein the blended diesel fuel was compared to conventional petroleum diesel fuels. Berlowitz teaches that significantly lower emissions were produced from the diesel fuel blend when compared to two different conventional diesel fuels. See column 6, line 59 to column 7, line 40. The examiner is of the position that Berlowitz meets the limitations of the above rejected independent claims. Applicants' invention may differ by adding a conventional additive, namely a detergent, to the diesel fuel blend which is not taught in Berlowitz. However, Bacha et al ["Bacha"] is added to teach that diesel fuel compositions containing Fischer-Tropsch derived diesel fuels may comprise conventional additives

such as detergents. See column 5, line 48 to column 6, line 66. Having the prior art references before the inventors at the time the invention was made it would have been obvious to the skilled artisan to have added a detergent to the diesel fuel blended composition of Berlowitz if its known imparted property was so desired.

### *Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.
